

BRIAN JONES

Senior Full-Stack & AI Automation Engineer · Engineering Manager

Belton, MO · brian.joneskc01@gmail.com · github.com/diegobkbc · dfppagency.com · [Download PDF](#)

SUMMARY

Full-stack engineer and engineering manager with 20+ years building enterprise business applications, from SharePoint, K2, and Oracle APEX platforms with Boomi and Oracle Integration Cloud integrations to modern TypeScript SaaS. Currently lead the Application & Integration Services (AIS) team at DH Pace, directing requirements definition, workflow design, and delivery for a portfolio of AI-enabled enterprise business applications, and run DFPP LLC, where over the past 18 months I have designed, built, and deployed more than a dozen production systems end to end: multi-tenant SaaS, an LLM-in-the-loop trading engine, an AI-agent observability platform, and a COPPA-constrained education platform. Strong in React/Next.js, Node/TypeScript, PostgreSQL, Cloudflare, N8N orchestration, and the Claude API, with a bias toward tested, documented, operable systems.

CORE SKILLS

Languages: TypeScript, JavaScript, SQL, C#, Python, Swift, Lua

Frontend: React 19/18, Next.js 15 (App Router), Vite, Tailwind v4, shadcn/ui, Material-UI (MUI) v5/v6 & MUI X Data Grid, React Flow, TanStack Query, Redux Toolkit, SwiftUI, Electron

Backend: Node.js, Express 5, Fastify 5, Next.js route handlers, C# / ASP.NET / WPF, Supabase Edge Functions (Deno), Netlify & Cloudflare Functions, REST, WebSockets

Data: PostgreSQL (Neon), Drizzle ORM, row-level security, SQL migrations, SQL Server (mssql), Azure SQL, Oracle DB / Autonomous DB / APEX ORDS (PL/SQL), Redis, SQLite, Firestore, R2/S3

AI & automation: Claude API / Anthropic SDK, Vercel AI SDK, Cloudflare Agents SDK, N8N orchestration, agent policy & approval design, prompt libraries, LLM circuit breakers, Claude Code skills/agents/MCP integrations

Cloud & ops: Cloudflare Workers, Durable Objects, R2, Turnstile; Netlify; Hetzner & Oracle Cloud VMs; Windows Server/IIS; PM2, Docker, Caddy/nginx, Cloudflare Tunnel; Doppler; GitHub Actions; Sentry, PostHog, Grafana Loki

Auth & security: Clerk, Auth.js, JWT, Argon2id, TOTP MFA, RBAC, multi-tenant isolation, CSP/HSTS, gitleaks, threat modeling, COPPA-constrained data design, Entra ID SSO (MSAL), Windows Auth (LDAP/AD)

Integrations: Stripe Connect, Resend, MailerSend, Twilio, OpenPhone SMS, Alpaca/OANDA, Slack, Telegram, Google Places/Gmail/Calendar, Etsy/Printful, Baan ERP (SOAP), IFS ERP (REST/SOAP)

Testing & quality: Vitest, Jest, Playwright, Supertest, Testing Library, jest-axe, Lighthouse, pa11y, TDD, OWASP-aligned hardening

Enterprise platforms: Oracle APEX, Boomi, Oracle Integration Cloud, K2 Five / Cloud / Blackpearl / SmartForms, SharePoint 2007–2016 & M365, Power Platform / Power Automate, Agile/SCRUM, Jira

EXPERIENCE

Business Analyst Manager · DH Pace Company — Application & Integration Services (AIS) Oct 2022 – Present · Belton, MO

- Leads a team of systems analysts, senior business analysts, a SharePoint administrator, and Oracle APEX developers, directing requirements definition, workflow design, and delivery for a portfolio of internal enterprise applications automating approval-driven business processes (commission review, credit and refund management, vendor payments, field payment collection).
- Built AI-assisted development into the team's standing delivery methodology, using Claude Code — multi-agent orchestration, custom skills, MCP server integration — to scope, build, test, and document software, including AI-generated technical specs, UAT checklists, and executive summaries.
- Salesperson Incentive Review:** replaced a manual, spreadsheet-driven commission audit with a 4-stage, AD-role-gated approval workflow (Auditor → Reviewer → Operations → Approval) spanning eight commission line types, plus batch toolbar actions for multi-record review; React/TypeScript, MUI X Data Grid, Node/Express, Oracle APEX ORDS, SQL Server, Entra ID SSO, self-hosted GitHub Actions CI/CD per environment.
- Credit Request (PaceX):** led requirements and phased delivery (3 phases, ~263 story points, full requirements traceability matrix) of a unified Baan/IFS credit-and-refund platform replacing SharePoint forms and email chains, with a configurable 5-stage, dollar-threshold approval workflow and automatic org-hierarchy-based approver assignment (>90% accuracy target).
- Vendor PrePayment:** migrated a legacy Nintex/SharePoint approval process to a custom app with a data-driven, location-based approver-matching engine, a 25+ script SQL migration history, and Playwright E2E coverage; passed a pre-deployment security/code-quality audit (82/100 security, 88/100 code quality, "GO" recommendation), clearing 9 of 10 OWASP Top 10 categories outright.
- Also directed an **IFS Payment Processing** proof of concept automating field payment collection via IFS's CFieldPaymentService API, with a rate-limited proxy, full audit logging to SQL Server, and AD-gated access control.

Founder & Principal Engineer · DFPP LLC

2025 – Present · Kansas City, MO

Solo-built and operate a portfolio of production web, mobile, and automation products on a converged stack (Next.js 15 / React 19 / TypeScript / Neon Postgres + Drizzle / Clerk / Express / N8N / Cloudflare); ~3,000 commits across 40+ repositories.

- GarageLink** (garagelink.io): multi-tenant scheduling and customer-communication SaaS for independent auto shops. Express 5/TypeScript API, three React SPAs (customer, shop owner, admin), account-less customer auth via 90-day signed links, and six N8N workflows (24-hour reminders, maintenance recalls, idempotent auto-cancel/nudge loops) over Resend email and OpenPhone SMS.

- **AMIS trading system:** automated forex/equities engine with Claude as signal evaluator. Node microservices, Alpaca/OANDA execution adapters, layered risk controls (LLM circuit breaker, drawdown/news/bias gates, 1%-risk sizing, Sharpe-weighted allocation, emergency stop). Backtesting engine, 16 test suites, Telegram bot; live since March 2026.
- **Agent Action Ledger:** audit-trail and observability platform for AI agents. Fastify 5 API, TypeScript and Python SDKs, and hook plugins for five coding agents (Claude Code, Gemini CLI, Copilot, Windsurf, Cline). Argon2id-hashed scoped API keys, Redis sliding-window rate limiting, webhooks, and a streaming anomaly pipeline (Count-Min Sketch, Bloom filter, HyperLogLog). 300+ automated tests, GitHub Actions CI/CD, Docker Compose, Grafana Loki.
- **DFPP Academy:** live K-12 AI-education platform for minors. COPPA-constrained schema (grade and age band only), mandatory TOTP MFA for staff, consent-gated student accounts, audit logging, Postgres-level tenancy, Turnstile and rate limiting on public endpoints, and a documented threat model, RBAC matrix, and incident-response plan.
- **Multi-tenant member records platform** for a national membership organization with three-layer tenant isolation: subdomain-resolving middleware, org-scoped query helpers, and Postgres row-level security. 600+ commits; served as the proving ground for the Cloudflare migration below.
- **Infrastructure migration program:** moved five properties from Netlify to Cloudflare Workers with black-box baseline suites required green on the old site and the new preview before cutover, 48–72h rollback windows, a D1-vs-Hyperdrive decision framework, and deny-by-default secret-guard hooks with their own regression suite.
- **Productized site delivery:** pipeline of 32 Claude Code skills and six specialist agents (prospect intake, Lighthouse baseline, mockup, production repo, SEO); 29 vertical demo sites deployed, and Lighthouse performance from 60 to 83 and accessibility from 86 to 96 on the first prospect engagement.
- **Marketplace and mobile:** two-sided event-vendor marketplace on Supabase and Stripe Connect (26 edge functions, commission splits, subscriptions, RLS, realtime messaging, queued email with retry); native SwiftUI + Express/Neon pet-services booking app with Supertest-covered API on Caddy/PM2/Doppler infrastructure.
- **Also built:** an AI guided-selling CRM (Claude sales coach, OpenPhone, Gmail/Calendar APIs); a Cloudflare Durable Object-based personal AI operator with a policy/approval engine and Slack signature verification; an open-source Electron project manager with embedded terminals and Claude briefings; N8N e-commerce publishing pipelines (Etsy/Printful) with encoded marketplace-compliance rules; and a Remotion video pipeline.

Volunteer Mentor, AI-Assisted Game Development · Independent — At-Risk Youth, Detroit, MI 2026 – Present

- Mentor at-risk youth in Detroit through hands-on, AI-assisted game development, using real production engineering practice as the curriculum rather than a toy project: **Quack Fortress**, a build-by-day/survive-by-night roguelike on Roblox — 264 commits across 11 milestones in ~10 days, 13,250+ lines of strictly-typed Luau across 65+ modules, 374 automated tests (Lune) gated by lint (Selene) and format (StyLua) checks.
- Instilled test-driven development (pure game-logic modules built test-first), a server-authoritative architecture with a validated Remotes client/server boundary, paired design-spec/implementation-plan docs per feature, dedicated code-review passes, and an MCP-driven automated Roblox Studio playtesting workflow.
- Systems shipped: a 15-night day/night survival campaign, six zombie archetypes with unique abilities, a base-building/tower-defense layer, a six-skill elemental progression system, a mobile-hardened UI suite, and live-ops funnel analytics via Roblox AnalyticsService.
- Built an end-to-end AI content pipeline (Higgsfield-generated 3D models/audio → Blender → Roblox Open Cloud → auto-generated Luau asset bindings); a hardening pass cut total asset weight 235MB to 26.5MB (-89%) and fixed 3 live production bugs.

Applications Developer · San Francisco Fire Credit Union Nov 2019 – Aug 2022 · San Francisco, CA Applications Developer (Aug 2021 – Aug 2022); Workflow Developer (Nov 2019 – Aug 2021)

- Built web, mobile, and desktop solutions with .NET, WPF, Power Automate, and SharePoint to optimize internal financial operations, including **Charity Donations**, **Inventory Management**, and **Image Manipulation** applications.
- Led integration of K2 workflow solutions into SharePoint and performed end-to-end database and workflow development.

Software Development Team Lead · Polsinelli PC Oct 2013 – Nov 2019 · Kansas City, MO

- Managed the development lifecycle for client-facing and internal SharePoint/K2 applications in a legal enterprise environment; directed Agile/SCRUM practices and coordinated vendor engagements.
- Delivered **Employee Management**, **IT Change Control**, and **Invoice Tracking** solutions, among others.

Earlier & Contract Roles 2004 – 2018

- **K2 Developer (Contract)**, Brazeway (2018) · K2 Blackpearl 4.7 / SmartForms workflow and form development.
- **Contractor**, Focused Management Inc (2012 – 2013) · SharePoint and workflow delivery.
- **Enterprise Application Analyst II**, ScriptPro (2011 – 2012) · enterprise application analysis and development.
- **SharePoint Architect / Sr. Architect-Admin (ATG)**, Aptuit (2007 – 2011) · SharePoint 2007 architecture & admin.
- **DBA Operations Manager**, WSS (2004 – 2007) · SQL Server database design, development, and operations management.

EDUCATION & CERTIFICATIONS

University of Missouri – Kansas City · Computer Science (2013 – 2015)

Johnson County Community College · Information Technology (2011 – 2013)

University of Kansas · Music Therapy (1992 – 1995)

Certifications: K2 4.7 / K2 Five (Core, SmartForms, Workflow, Admin); Lean Six Sigma Green Belt; ITIL Foundation; Alkami SDK Dev; ASP.NET MVC / Full-Stack Web Dev; Jira & Agile Methodologies
